

Consulting Service: Project Management

Allow Vision Solutions to coordinate and supervise the various elements of a Disaster Recovery or Server Migration project -- from the initial planning stages and execution until final customer sign off and acceptance.

By providing a coordinated solution, the project managers at Vision Solutions can facilitate the smooth and seamless execution of your project. They'll manage project costs, scope, schedule and risks. The Vision Project Manager assumes responsibility for directing the project, providing status updates or reports, and serves as the customer's primary contact until the project is completed. The Project Manager works with you to define requirements, schedules, and project plans; supervises and coordinates Vision personnel, along with your own IT staff and/or third-party personnel. Additionally, by leveraging Vision Project Management, you can dedicate and focus your internal resources to its core competencies while we tackle your disaster recovery or migration project.

Project Management is available for customers who are deploying Double-Take solutions for Disaster Recovery, High Availability or Migration.
