

Environment Preparation

Vision Solutions can streamline the process of deploying your Double-Take solution. In conjunction with a professional services implementation, Vision Professional Services will provide the expertise to install and configure target server environment, either for your High Availability, or migration project. After a pre-implementation session to identify your requirements and objectives, our services experts can assist with:

- Validating and configuring your target hardware
- Installing Windows or Linux based operating systems that you provide
- Integrating the target servers into your existing enterprise
- Configuration of Microsoft Failover Clustering services
- Installing application software
- Pre-seeding of target data

Additionally, our trained virtualization experts can help you deploy and configure either a Microsoft Hyper-V or VMware Virtual Infrastructure/vSphere server environment.
