

Double-Take Availability for VMware

High Availability for Your VMware Virtual Servers

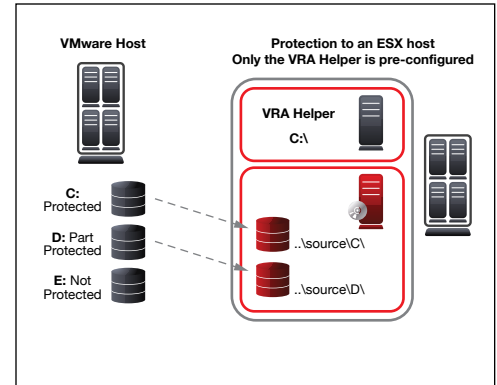

Your company has realized the benefits of virtualizing servers. No more wasted server capacity, infrastructure costs and energy usage are reduced, and you can more easily manage and deploy virtual servers. It all sounds great, but there is one catch; before virtualization, critical applications and data were spread across multiple servers. Now, you have one server that could host multiple critical applications. How do you ensure those critical applications and data are always available?

The Vision PowerPack, Double-Take Availability for VMware virtual servers, is the ideal solution to make it easy to keep you and your customer's critical data always available. With this solution you can choose between protecting the whole host or you can protect specific data and applications from within the guest. As changes are made they are replicated to the target server. When a failure is identified a manual or automated failover to your target server either locally or across the WAN enables your business to maintain operations and access to the critical applications and data running in your virtual environment.

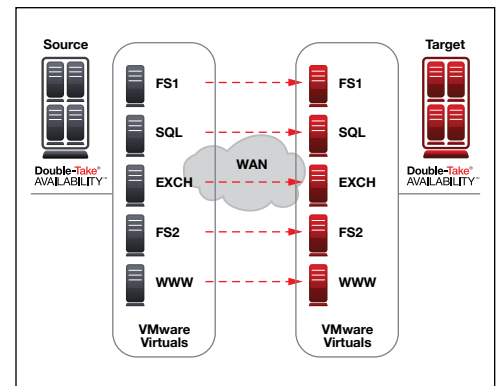

"Our servers are critical to a truly satisfying customer experience... And because we work in a sensitive environment, we can't afford to lose data or availability due to a disaster or disruption. By using Double-Take for Virtual Systems with VMware virtualization products, we can continue to work effectively and efficiently—even during a system crash or outage. We don't miss a beat, which is crucial to our mission."

– John Forelli, vice president of IT, Borgata Hotel Casino and Spa

Protection at the guest level

Protection at the host level

Protection for VMware Virtuals

Virtual environment support

- Protect the full virtual host or identify specific datastores within the virtual host to protect.
- Fine tune new virtual size, memory and processors.
- Agent can run in VMware guest or at the host level.

Flexible protection and recovery

- Hardware independent.
- Use your own network locally or across the WAN.
- One-click failover and restore.

Easy administration and setup

- Automated setup and configuration
- Monitor server health.
- Test failover feature.
- Automated provisioning of new virtual machine.
- Host level protection allows you to protect across virtual platforms.

Protect and keep productive

- Process and replicate open files.
- Keep users on-line and productive while replicating changes in the background.

Vision Solutions. Easy. Affordable. Innovative.

Vision Solutions is a leading provider of high availability, disaster recovery and data management solutions for IBM Power Systems, Windows, Linux and Cloud Computing environments. Vision products ensure business continuity, increase productivity, reduce operating costs and satisfy compliance requirements.

Vision Solutions oversees a global network of business partners and services and support professionals to help you achieve your business goals.
