

Availability Test

Are you prepared? Can you prove it? Make sure you are ready for a system failure or a full disaster, and have the documentation to prove it. Let expert technicians from Vision Solutions verify that your data and applications are fully protected, available and recoverable through a comprehensive switch test.

Technicians from Vision will perform a switch test on your iTERA HA, MIMIX HA or OMS/ODS high availability environment and troubleshoot any issues that could threaten your business. In the process, we will also verify that you will be able to recover quickly and completely.

An Availability Test solution pack includes six components:

- First an audit will be conducted using your original planning objectives to determine the current effectiveness of the implemented solution.
- Next, in the planning phase Vision will review your current iTERA HA, MIMIX HA or OMS/ODS high availability environment and work with you to review our latest product features and discuss how our latest technology can help you to simplify your operations. Vision Solutions will also assist in the identification of any evident configuration errors that could affect replication accuracy and switching ability. An audit will be conducted, referencing any applicable planning documentation, to determine current solution effectiveness.
- In the configuration phase, Vision will work with you to update your current iTERA HA, MIMIX HA or OMS/ODS environment with the latest technology and update your configuration as needed to optimize operations.
- In the skills transfer phase, Vision will train designated members of your staff on how to use our latest product features to maximize availability.
- In the documentation phase, Vision will update your existing Runbook based on test results and in the switch test phase Vision will perform a pre-switch audit & switch test.
- A typical Availability Test requires three days to complete and will be performed remotely by Vision experts. To ensure systems security and integrity, remote access to your systems is achieved utilizing a WebEx session that is under your oversight and control at all times. By avoiding travel time and costs, the result is a much faster, less expensive project than if a technician had to perform the work on your site.

To learn more about Vision's Availability Test service, call **800-957-4511** or visit **visionsolutions.com**.

Benefits

- Assured switch-readiness.
- Better understanding of HA solution components.
- Easier and more complete audit and compliance reporting.

Deliverables:

- Audit Report development and presentation.
- Installation of latest iTERA HA, MIMIX HA or OMS/ODS updates.
- Configuration tune-up to maximize the use of Vision's latest technology.
- A review and update of your Availability Runbook.
- A live switch test.
- Skills transfer focused on using the latest high availability software features.
