

Vision Director Quick Start

It's time you received a little help from automation. Vision Director, a highly integrated set of applications that proactively monitors, manages and optimizes IBM i servers, databases and application environments, can dramatically reduce the amount of time you spend performing these tasks.

Vision Director Quick Start service includes expert installation of Vision Director, training and initial consulting services so you can efficiently configure the product and begin to:

- Reduce storage usage by as much as 40% immediately, and even more over time.
- Accelerate application performance for a more agile, responsive business environment.
- Improve system administrator productivity by automating maintenance tasks.
- Comply with the most stringent accountability and regulatory mandates.

As part of your Vision Director Quick Start, you will receive a schedule of identified optimization projects with a recommended high-level plan for each. You can then either complete these projects internally or partner with Vision.

The Vision Director Quick Start service includes three components:

- First, expert technicians from Vision Solutions will implement Director on your system.
- Then, Vision will deliver demonstrations and training on Director's features and functions for up to ten of your staff.
- Finally, Vision technicians will review your environment, identify areas needing optimization. If time permits during the Quick Start engagement (typically two days), perform some of the optimization tasks.

If no time is remaining during the Quick Start project, Vision will estimate the additional effort required to complete any identified system optimization tasks and create a Statement of Work identifying the time and cost required for Vision to complete the work. You will then be offered the option of performing the tasks in-house or authorizing Vision to undertake the work.

To learn more about Vision Director Quick Start services, call **800-957-4511** or visit **visionsolutions.com**.

Benefits

- Shorter project cycle and more efficient use of staff.
- Expertly customized initial implementation.
- Accelerated proficiency in the use of Vision Director's powerful optimization and report generation capabilities.

Deliverables:

- Vision Director User Manual.
- Customer Care introduction booklet.
- High-level project plan.
- Statement of Work for any follow up activities.
