

## Availability Tune-up

Assured readiness is the key to effective High Availability. Management and auditors want to be certain that the recovery of system resources will go as planned if a failure or disaster occurs.

With Vision Solutions' Availability Tune-Up service, you can gain confidence in your HA plan. Let our experts thoroughly evaluate your Microsoft Windows requirements and then provide you with recommendations and modifications to help you better protect your Windows-based applications and data.

Your Availability Tune-Up includes four components:

- First an audit will be conducted, using your original planning objectives, to determine the effectiveness of your currently implemented solution.
- Next, in the planning phase, Vision will review your current Double-Take Availability or Double-Take RecoverNow high availability environment and provide you with an overview of our latest product features. Then, we'll discuss how our latest technology can help you to simplify your operations. Vision Solutions will also assist in the identification of any configuration errors that could affect replication accuracy and switching ability.
- The configuration phase of this service ensures that you are current on Double-Take Availability and Double-Take RecoverNow updates and enhancements.
- In the skills transfer phase, Vision Solutions will train designated members of your staff on how to use our latest product features to maximize availability.

A typical Availability Tune-Up covers two days and is performed remotely by Vision Solutions experts. To ensure systems security and integrity, remote access to your systems is achieved utilizing a WebEx session that is under your oversight and control at all times. By avoiding travel time and costs, the result is a much faster, less expensive project than if a technician had to perform the work at your site.

To learn more about Vision's Availability Tune-Up, call 800-957-4511 or visit [visionsolutions.com](http://visionsolutions.com).

### Benefits

- Optimized HA that includes all the latest enhancements.
- Expert assurance that your HA environment is fully protecting your business.
- A refreshed understanding of the mechanics of you HA environment.

### Deliverables:

- Audit Report with presentation.
- Installation of latest Double-Take Availability or Double-Take RecoverNow code.
- Configuration tune-up to maximize the use of Vision's latest technology.
- Skills transfer focused on using the latest high availability software features.
