

## **Vision Solutions Accelerates the Adoption of Private Clouds Without User Interruption and Provides Seamless Disaster Recovery**

***Customers Take Advantage of Double-Take® Move and Double-Take® Availability with features built for VMware's vSphere platform***

**Irvine, Calif. – August 31, 2010** – Today **Vision Solutions, Inc.** announced solutions for migration to and protection of the VMware vSphere platform with their Windows platform Double-Take® Move and Double-Take® Availability products. These products deliver comprehensive solutions allowing administrators to easily migrate to and protect private cloud **vSphere** environments, as well as to easily provision non-production environments for safely testing their companies' disaster recovery plans.

Vision Solutions acquired Double-Take Software in July 2010 and will be present at this week's North American **VMworld** conference in booth #938.

### **Double-Take Move Key Facts**

Vision Solutions' **Double-Take Move** allows administrators to accelerate adoption of the VMware vSphere platform without end user interruption or downtime. Double-Take Move allows administrators to easily and quickly migrate from a physical or virtual environment into a vSphere private cloud.

- Double-Take Move allows administrators to perform heterogeneous storage and hardware migrations between different vendors and platforms.
- With Double-Take Move, end users can access production applications right up until the moment administrators perform the final cutover of the workload, which minimizes downtime to minutes.
- Double-Take Move uses purpose built auto-provisioning technology to make creating new virtual machines simple and easy.

### **Double-Take Availability Key Facts**

**Double-Take Availability** provides high availability and disaster recovery for both virtual and physical environments. The Double-Take Availability Virtual Recovery Assistant feature is a useful tool in both disaster recovery testing and real-life recovery scenarios.

- In the event of a disaster, the product's built in Virtual Recovery Assistant feature allows administrators to seamlessly recover virtual machines from bare metal.
- For advanced disaster recovery testing and mock recovery scenarios, the Virtual Recovery Assistant allows administrators to provision additional virtual machines in non-production environments to test their infrastructure resilience plans.

- Double-Take Availability supports heterogeneous storage infrastructure across primary and disaster recovery facilities so that administrators can mix and match storage platforms to ensure their disaster recovery spending is “right sized.”

**Quotes:**

*Fernando Zangrande, manager of data center services at Locaweb:*

“The solution for our P2V migration was so simple. It was just easy. We used Double-Take Move to convert physical Windows servers to virtual servers.”

*Christian Tate, vice president of market development at Vision Solutions:*

“We are continuing our relationship with VMware to provide solutions that are affordable, easy to implement and deliver the highest level of disaster recovery and application availability. Along with our long-standing leadership in disaster recovery, we are proud to say that our products allow customers to implement virtual servers faster than anyone else in the market.”
