

Vision Solutions. Easy. Affordable. Innovative.

“We were able to see a high level of productivity and greater IT efficiency with Vision Replicate1 because it was able to handle our large geo-spatial files easily without programming.”

American Forest Management

Vision Replicate1™

Real-Time, On-Demand Cross-Platform Data Sharing

Are multiple databases, incompatible applications and disparate platforms preventing your organization from efficiently sharing critical business information? **Vision Replicate1™** breaks through those barriers with simplified, on-demand, enterprise-wide data transformation. Now it's easy to capture, replicate and transform information and share it whenever and wherever it's needed. Achieve greater productivity and higher profitability for your business and immediate ROI—from the first day. With no programming required.

Drives Real-Time Information Exchange

Vision Replicate1 makes information available to the people who need it, when they need it. It provides on-demand access to data between any applications, regardless of database format or operating system.

- You decide what data gets moved and where—even from one source to many destinations at once.
- Moves data from source to target automatically, either in real time or on your schedule.
- Automatically captures data changes and updates information.
- Ensures data integrity on both source and target databases.
- Handles even large databases, including a broad range of relational data types and hard-to-handle spatial data.

Flexible and Easy to Use

Vision Replicate1 is easy to configure and use and requires no end user training. Its intuitive management console enables complete monitoring and control of day-to-day data sharing processes. Just point, click and **Vision Replicate1** does the rest.

- Eliminates the time, labor and expense of programming fixes for data sharing.
- Transforms your data to meet the unique needs of each business application.
- Includes over 40 pre-built, click-and-go data transformation functions to save setup time.
- Customization tools give you the power to fine-tune your control of data sharing.
- Recognizes and resolves any conflict when two transactions update the same database from different sites at the same time.
- Ensures zero data loss for consistently reliable business decisions.

Do More with Your Business Data—Easily and Affordably

Because **Vision Replicate1** is completely application independent, you can focus on which applications best meet your business objectives rather than which work best at sharing data. With **Vision Replicate1**, you can do more with your business.

- Achieve greater productivity and higher profitability by eliminating data barriers between applications.
- Launch new initiatives across separate business units
- Make better informed business decisions.
- Accelerate server migration projects.
- Integrate disparate systems following a merger, acquisition or downsizing.
- Share legacy data with new applications.

"Vision Replicate1 helps keep our students and their families informed in real time and enables our teachers and administrators to perform faster, better data analysis. Real-time access to select information provides us with analytic capabilities comparable to those at Fortune 500 companies."

– Broward County Public Schools

"Vision Replicate1 gives us many advantages as a company, allowing us to make decisions quickly with shared, real-time data."

– Grupo Uriach

How Flexible Is Vision Replicate1?

Here's one example. You could share data between an Oracle manufacturing database on a Linux server, a Sybase accounting application on a Unix server and a data warehouse using DB2 on a mainframe. Or between any common database format and any application on any platform. What could your business accomplish with Vision Replicate1?
