

Vision PowerPack for Remote Office Protection

Efficient Protection Over Any Distance

More and more data exists at the edge of the enterprise, where bandwidth is limited, yet the time available to protect data diminishes while the impact of data loss increases. Protection for remote data is essential to ensure the business is in compliance and prepared for possible disaster.

The Vision PowerPack for Remote Office Protection is a customized offering that assists companies in using the Double-Take RecoverNow product to solve the challenge of remote data protection.

Lennox International Centralizes Data Protection

Lennox International solved increasing local backup failures at over 100 remote locations by implementing Double-Take RecoverNow to protect and recover data remotely, realizing significant increases in productivity and reduction of operating costs for protecting remote sites. *"Before we even get the help desk ticket [to restore a file], the file is there."*

—Drew Duke, IT Manager

Optimize Your Remote Office Protection

Double-Take RecoverNow is a disk-to-disk backup and recovery product that uses bandwidth-efficient replication to protect data and entire servers over limited bandwidth networks. For additional network efficiency, Double-Take RecoverNow works with leading WAN optimization devices like Riverbed Steelhead appliances. Vision certified professionals can help you analyze your remote protection capabilities to implement a custom solution that fulfills your business goals.

Real-time disk-to-disk protection

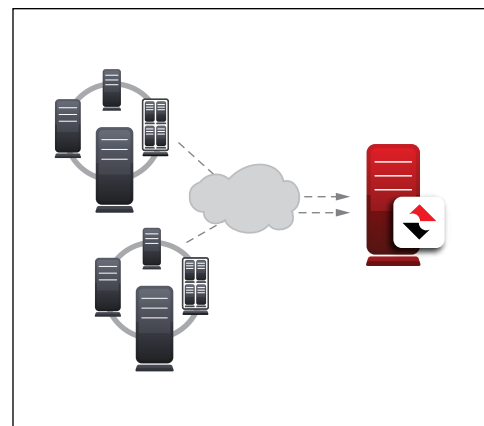

- Protect continuously with no backup windows.
- Efficient byte-level replication sends less data than block or file level methods.
- Bandwidth limiting and scheduling ensure bandwidth is used effectively.
- Configurable levels of compression.
- Continuous data protection enables recovery down to the last second before data loss.

Flexible disk-based recovery

- Recover data from any point-in-time in an easy recovery workflow.
- Recover entire servers to new virtual machines or physically dissimilar hardware.

Riverbed WAN optimization

- Eliminate data redundancy at the byte level.
- Overcome latency within the network with protocol optimization.

Vision Solutions. Easy. Affordable. Innovative.

Vision Solutions is a leading provider of high availability, disaster recovery and data management solutions for IBM Power Systems, Windows, Linux and Cloud Computing environments. Vision products ensure business continuity, increase productivity, reduce operating costs and satisfy compliance requirements.

Vision Solutions oversees a global network of business partners and services and support professionals to help you achieve your business goals.
