

Vision PowerPack for Microsoft SharePoint

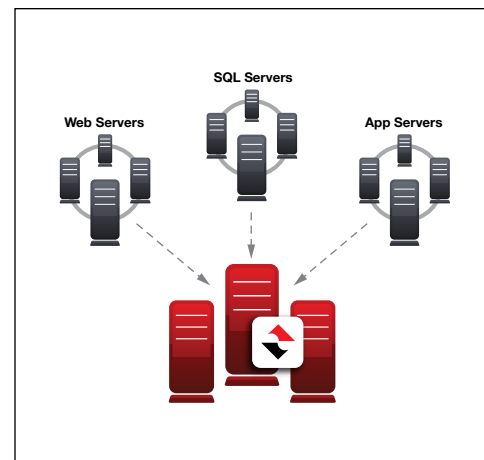

SharePoint is a Critical Resource for Business

With over 100 million licenses of SharePoint sold, enterprises are increasingly leveraging the power of SharePoint to connect employees with each other and to essential business information. SharePoint has become a critical application, and consequently, the need to protect and recover SharePoint has increased correspondingly.

The Vision PowerPack for Microsoft SharePoint is a customized offering designed to ensure that every SharePoint deployment, regardless of size or complexity, can be protected with minimal data loss in an outage, and with the appropriate recovery time objective for your business.

Customized Protection for Any SharePoint Configuration

Though IIS web servers and SQL databases both provide some capabilities for redundancy, these individual solutions do not address an entire SharePoint implementation, including essential application services. Whether your entire SharePoint implementation exists on a single server, or your deployment consists of multiple web, application, and database servers, Vision certified professionals can help you achieve a unified, cohesively managed SharePoint high availability or disaster recovery solution.

Real-time disk-to-disk protection

- Protect continuously with no backup windows.
- Replicate open files with users online.
- Byte-level replication sends less data than block level protection.

Advanced SQL protection

- Protect clustered SQL data to standalone or clustered failover resources.
- Monitor SQL server health.

Full-server protection reduces overhead

- Recover or failover entire application servers to new VMs or physically dissimilar hardware.
- Recover locally, retaining the IP address, or recover remotely and automatically update DNS to refer users to the recovery site.

Easy administration and setup

- Test failover and recovery.
- SQL-specific workflows simplify the configuration of SQL protection.

Vision Solutions. Easy. Affordable. Innovative.

Vision Solutions is a leading provider of high availability, disaster recovery and data management solutions for IBM Power Systems, Windows, Linux and Cloud Computing environments. Vision products ensure business continuity, increase productivity, reduce operating costs and satisfy compliance requirements.

Vision Solutions oversees a global network of business partners and services and support professionals to help you achieve your business goals.
