

# Vision PowerPack for VMware Virtualized Recovery

## The Impact of Virtualization on Data Protection

In a survey of virtualization trends, facilitating disaster recovery was listed as the number one impact of virtualization on data protection processes. This is no surprise as the benefit of virtualized disaster recovery is significant. Rather than duplicating a myriad of unique physical configurations at a second location that must be constantly maintained, a virtualized disaster recovery solution only requires that enough generic computing and storage capacity exists at the recovery site.

The Vision PowerPack for Virtualized Recovery is a customized offering that helps companies create comprehensive IT disaster recovery plans that can recover both physical and virtual workloads into a VMware virtual environment, to ensure business continuity in the face of disaster.

## Baxter Credit Union

*"It is priceless to be able to protect 30+ different types of applications with one solution. In the past, when a server failed, the recovery process was incredibly cumbersome and time-consuming. Now, the real-time system state protection that Double-Take... simplifies the system restoration to any desired recovery point regardless of the hardware."*

—Pete Sedgwick, IT Manager

## The Freedom to Go Virtual ... and Then Back to Physical

While virtualization adoption continues to increase, most enterprises have not fully virtualized and continue to deliver some essential applications directly from dedicated physical servers. A customized solution using Double-Take RecoverNow provides the power to virtualize those workloads for disaster recovery, but then restore them to physical environments later.

When this powerful portability of workloads is combined with industry leading Double-Take replication, you will have the tools necessary to create a flexible and comprehensive DR plan for your essential systems.

### Real-time disk-to-disk protection

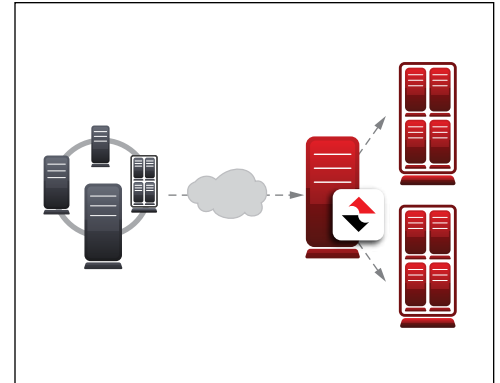

- Protect continuously with no backup windows.
- Byte-level replication sends less data than block level protection.

### Easy management and setup

- Test recovery without interrupting protection.
- Monitor physical and virtual protection on a single screen.

### True any-to-any recovery

- Recover to automatically provisioned VMs.
- "Right-size" the virtual machine during recovery to maximize CPU and storage usage.
- Test recovery without downtime for users.

## Vision Solutions. Easy. Affordable. Innovative.

Vision Solutions is a leading provider of high availability, disaster recovery and data management solutions for IBM Power Systems, Windows, Linux and Cloud Computing environments. Vision products ensure business continuity, increase productivity, reduce operating costs and satisfy compliance requirements.

Vision Solutions oversees a global network of business partners and services and support professionals to help you achieve your business goals.
