

EchoCluster Quick Start

EchoCluster Quick Start service from Vision Solutions is the best way to accelerate the deployment of EchoCluster and immediately enjoy the benefits of continuous availability for your AIX-based business applications.

Today, IT managers are being asked to make larger contributions to the company's bottom line, even while working with fewer resources. Increasingly, they're relying on the technical expertise of vendors to achieve organizational objectives. Vision's EchoCluster Quick Start service provides hands-on technical assistance with your implementation, including everything from planning to installation and testing, for a cost-effective and stress-free experience.

Further underpinning the value of EchoCluster's Quick Start, Vision's technicians will provide instruction on how to facilitate daily maintenance and perform basic troubleshooting tasks to keep EchoCluster at peak performance.

Vision's EchoCluster Quick Start service encompasses three important phases:

- First, Vision technicians conduct a project-planning workshop to review your requirements and objectives.
- Next, they prepare and deliver a detailed Solution Planning Report.
- Finally, with your assistance, Vision technicians install, configure and tune EchoCluster, as defined in the Solution Planning Report, on one source and one target node. As part of this service, your staff is trained on how to start, stop, administer and perform basic troubleshooting for EchoCluster.

To learn more about Vision's EchoCluster Quick Start services, call **800-957-4511** or visit **visionsolutions.com**.

Benefits

- Shorter implementation project cycle and more efficient use of staff.
- Assured complete and optimal implementation, customized to your exact business needs.
- Accelerated proficiency in EchoCluster's use.

Deliverables:

- Expert installation and EchoCluster Solution Planning Report.
- Installation and configuration of the EchoCluster solution on a pair of nodes (one source and one target).

High Availability Disaster Recovery Systems and Data Management
