

MEDIA ALERT

Episode Four of Power Talk: The Vision Solutions Podcast Talks Real-World HA Experiences with Vision VP of R&D

IRVINE, CA (April 26, 2017) – Vision Solutions, a leading provider of business resilience solutions for IBM Power Systems, published episode four of its “Power Talk” podcast featuring 30-year industry veteran and Vision Solutions' VP of Research and Development Craig Johnson.

Topics of discussion include:

- Disk and bandwidth optimization with remote journaling
- Key differences between software replication alternatives
- Trends in transaction volumes and recovery time objectives (RTO)
- How high availability (HA) can add to a security strategy
- Tips for IT teams considering HA solutions

An excerpt of the conversation:

Becky Hjellming: What other themes are you hearing when you work with IT groups that are managing IBM i servers?

Craig Johnson: I’m definitely seeing a lot of trends this year in terms of skillset shortages, leveraging managed services or clouds, and upgrades (that’s always there). There is a lot of virtualization being deployed today among customers using Power Systems that really have improved. IBM has really done a lot in the virtualization space, in terms of virtualizing partitions and storage and memory. So, certainly a lot of changes, and a lot of challenges as a result of that, for IT directors and the application development teams.

“Craig Johnson offers a unique blend of commentary on both industry trends and how his efforts at Vision Solutions tie into them,” said Edward Vesely, EVP and CMO of Vision Solutions. “Craig’s conversation with Becky illuminates many of the subtler points touched on by previous Power Talk guests and delivers a preview of what’s on the horizon for IBM Power users.”

About Vision Solutions

Vision Solutions is a leading provider of business resilience solutions – high availability, disaster recovery, migration and data sharing – for IBM Power Systems. For more than 25 years, customers and partners have trusted Vision to protect and modernize their environments, whether on-premises or in the cloud.
