

Vision Solutions. Easy. Affordable. Innovative.

“With OMS/ODS for IBM i, we can guarantee the high availability we need to serve our customers 24 hours a day.”

Raiffeisenbank

OMS/ODS™ for IBM i®

Keeps your business running enterprise-wide, without exception

If your business needs an enterprise-strength data and application availability solution, it needs **OMS/ODS**. Exceptionally flexible and scalable, OMS/ODS' high availability and disaster recovery capabilities are designed for the transaction-heavy, multi-system, multi-CPU and clustered IBM i environments that are typical in large and global organizations. Achieve an unparalleled level of IBM i server availability with OMS/ODS, and get peace of mind for both you and your company's executives.

A Powerful High Availability Solution for Large and Complex Environments

OMS/ODS' industrial-strength replication features, combined with robust role swap capabilities, assure comprehensive high availability and disaster recovery for the largest and most sophisticated of environments. It lets you use your choice of remote or local journaling and enables flexible replication topologies, including one-to-many, many-to-one or many-to-many. And, of course, it supports advanced technologies, such as MQ Series, three-tiered applications and clustering.

High Availability for the Most Demanding of Enterprises

OMS/ODS' best-of breed features provide the ultimate in reliability, performance, scalability and flexibility.

Delivers Availability Without Limits

High-throughput architecture optimized for multi-CPU servers, supporting millions of transactions per minute.

Protects Complex Environments

Manages the full spectrum of IBM i availability needs for major companies, providing a wide range of solutions from disaster recovery through clustering.

Assures Accuracy

Multi-layered integrity checking prevents lost transactions and corrupted IP traffic. This and other sophisticated automated verification techniques help to ensure that your environment is always ready to protect against downtime.

Fits Your Business, Today and Tomorrow

Highly configurable features allow you to optimize OMS/ODS to fit your environment, regardless of how unique or sophisticated it may be. Extreme scalability means OMS/ODS will continue to support your expanding business, no matter how rapid your growth path may be.

Minimizes Administration Costs

Ease of use and autonomic management features help to reduce labor time and training costs. Failover and switchover automation eliminates complexity and reduces the potential for errors when performing a system role swap.

"Vision saves us money and inspires customer confidence by enabling us to avoid any downtime. If we did not have Vision and our systems went down, it would only take about three days of downtime for the company to go out of business. That's how critical Vision is to TNT."

– TNT Italy

"If a company is thinking of implementing OMS/ODS, I would tell them to calculate the possibility of a total halt in operations, then assess the impact of lost time in the business and they will have their answer. Personally, I can say that OMS/ODS gives us enormous peace of mind."

– B. Braun

"[With OMS/ODS] we are able to do role swaps with confidence."

– Stations Casinos

How Can OMS/ODS Add Value to Your Enterprise?

Big companies do big business using complex IT environments. As little as one hour's worth of downtime can cost millions of dollars. OMS/ODS' complete, high-volume data and object replication and its rapid failover and switchover capabilities put an end to most downtime. Think how much that's going to add to your company's bottom line.

- Eliminate most downtime costs.
- Scale high availability operations across even the largest, most demanding environments by employing a high throughput, high performance solution.
- Reduce administration costs with an easy to use and administer solution that includes considerable autonomies for self-administration.
- Protect the accuracy of your critical data with multi-layered integrity checking and correcting.
- Ensure a worry-free high availability environment with 24x7 enterprise-class customer care and an extensive network of certified local implementation partners.
- Trust a solution that has been proven in more than 2,000 customer implementations.
