Systems Management
Data Management

Vision Solutions leads the IBM Power Systems market with innovations in availability, recovery, and systems and data management technologies. Our solutions combine with numerous best practices, and the latest IBM technologies, to usher in a new era of IT resilience that we call Resilience 2.0.

What does Resilience 2.0 mean for you?

Any Budget. New data resilience options exist for any size company.
Any Data. All environments across IBM Power Systems are resilient.
Any Place. There are no limits to protecting data at far-flung locations.
Any Situation. Any planned or unplanned interruption is covered.
Any Person. Resilience technologies are easily managed by any IT staff.
Any Time. All recovery-time and recovery-point objectives are achievable.

Vision Solutions products make Resilience 2.0 easy and affordable, ensuring business continuity, increasing productivity, reducing operating costs and simplifying regulatory compliance.

Ensure Nonstop, Resilient Business Operations

Vision high availability (HA) solutions deliver nonstop business continuity, boost productivity and accelerate business processes. Innovative, easy to use switching and replication solutions eliminate costly IT downtime.

iTERA™ HA for IBM i

The easy, affordable and worry-free way for small and medium sized businesses to protect their critical IBM i applications and data. iTERA virtually eliminates both planned and unplanned IT downtime with only minutes per day of administration.

MIMIX® HA for IBM i

Built for the most demanding enterprises, MIMIX HA virtually eliminates planned and unplanned IT downtime with automated features that minimize HA administration and ensure HA integrity. Includes MIMIX continuous data protection (CDP) technology for easy, any point-in-time data recovery.

OMS/ODS™ for IBM i

Delivers maximum protection and continuous availability for critical applications in large and sophisticated enterprise environments. With innovative, best-of-breed features, OMS/ODS offers proven reliability, performance, scalability and flexibility.

Double-Take® for Windows

The world's most relied upon solutions for protecting Microsoft Windows® environments. Get the highest levels of availability for business critical data and applications including those running on Exchange, SQL Server, SharePoint and Oracle.

Vision Cluster1™ for IBM i

Robust cluster management, with or without logical replication. Extend and enhance HA and Cluster Management technologies, including PowerHA, Switched Disk, Cross Site Mirroring (XSM) and Cluster Services.

EchoCluster™ for AIX

Keep your AIX environments resilient and protected, easily and more affordably than with other solutions. Continuous server monitoring and immediate, automated failover to an alternate server minimizes both planned and unplanned downtime.

Protect Critical Data, Recover Faster

Vision disaster recovery (DR) solutions protect critical information and recover lost data in a fraction of the time and effort of traditional tape backup solutions. Affordable, automated solutions deliver the power of continuous data protection and the flexibility of in-house or hosted recovery options.

RecoverNow™ for IBM i

Powerful Continuous Data Protection (CDP) that lets you rapidly recover a single damaged object, or your entire system, to any point in time after your last tape save—no second server required.

EchoStream™ for AIX®

A true continuous data protection (CDP) solution that delivers any point-in-time data recovery at the push of a button. Instantly reverse accidental or malicious data corruption without the time/labor required for recovery from tape.

Supercharged Performance for Systems and Data

Vision systems and data management solutions accelerate the performance of your most important IT and information assets while significantly reducing labor, complexity and daily administration. Get more out of the systems and data that keep your business moving forward.

Vision Director™

Automatically monitors, manages and optimizes IBM i environments, databases and application environments for breakthrough performance, reduced IT labor and the freeing up of system resources.

Vision Replicate1™

Delivers enterprise-wide, real-time data sharing across all platforms, applications and databases—without programming. Perfect for key initiatives like business intelligence, migration, data/application integration and data warehousing.

Migrate While Active™

Empowers businesses of all sizes to rapidly migrate their applications and data to a new IBM Power Systems server running IBM i or AIX, without downtime or risk. Easily switch users to a new server in just minutes without interrupting your business operations.

Vision Data Manager™

Automates the modeling, testing, purging and archiving activities for IBM i application environments. Free up disk space, preserve critical records and improve response times with easy archiving that doesn't interrupt users or business processes.

Reorganize While Active™

Reorganize files without interrupting users or stopping business processes. Reorganize While Active lets you improve system performance without downtime or lost productivity.
